High performance
with a wide range of
solutions and options.

Product description

LabelSecure checks labels and the information they contain on the top and bottom of packages.

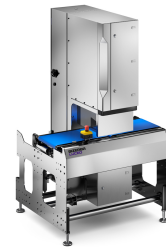

LabelSecure S is the optimal solution for samples. Operators must correct detected faults before production on the production line can resume.

The Inline solution LabelSecure G2 rejects products and warns users in the event of errors or production problems by means of an alarm allowing them to solve a problem immediately. LabelSecure thus prevents extensive rework on non-conforming packagings as well as claims and product recalls due to incorrect labeling or defective direct printing on cardboard, film or other packaging materials. This ensures that only flawless products reach the market. Furthermore, products can be fully tracked since all images recorded during production can be archived. The monitoring of the packaging process is ensured by quality reports which are prepared on a regular basis.

LabelSecure is compatible with numerous packaging types and can be used for a great number of tasks.

LabelSecure G2 L - Stand-alone

LabelSecure G2 T - Integrated

Highlights

- Software for complete tracking of all products: Saving of images incl. date and time, counter, production and machine logbook
- Prevents incorrectly labeled packages in retail
