with a wide range of
solutions and options.

Product description

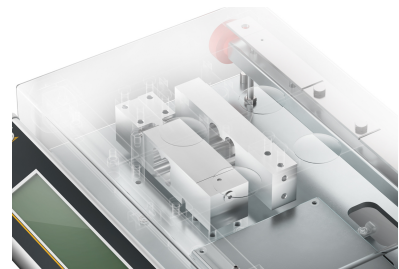

The ITC-S2 solution lets you exactly and quickly weigh a broad spectrum of goods shipments. Two integrated load cells make it possible: This all-rounder precisely weighs shipments of up to 3 kg as accurate as 1 g. For shipments from 3 to 32 kg this device automatically switches to the second load cell. Here, the weighing result has an accuracy up to 10 g.

This space-saving dual-range scale is also impressive in terms of its sophisticated design: For safe handling the bell-shaped platform is curved. Your advantages: Roll-shaped parcels are fixed during the weighing process, flat shipments can be picked up better. The determined shipment weight can be easily read on a 20 mm 7-segment display. At the same time, the optional second display informs your customers about the weighing result.

An RS232 interface ensures a smooth data transfer of the weight values to a PC or an EDP system. If requested, we provide you with an ITC-S2 with complete metrological verification by manufacturer.

ITC-S2

ITC-S2

Highlights

- Dual-range scale 3 kg/32 kg with verifiable scale interval 1 g/10 g
- Serial interfaces for a smooth data exchange
- Convenient setting of the integrated weighing module via configuration tool
- Easy and safe handling:
 - Bell-shaped platform curved 4 times for fast removal of letters and safe fixation of round shipments
 - Integrated display and operating unit: 7-segment display, digit height: 20 mm; key functions: Switch on/off, zero setting, taring and test
- Easy to handle adjustable feet for fast and simple leveling, also for integrated desktop solution
- External power supply unit for fast and easy replacement when servicing is needed
