

# Linerless Printer with Auto-Cutter and Hot Swap Technology

Efficient, Flexible, Durable.

\*) Roll meter, 180 m only K3 100 printer

Bizerba Linerless

Designed for flexible applications from counter sales, self-service counters to price labeling: Handling is simple and intuitive. It features increased efficiency as a result of the large linerless rolls, significantly reducing the need to change rolls. You save label material and waste thanks to the flexible label lengths and the absence of backing paper. With the integrated Auto-Cutter, clean, smooth cutting edges are ensured every time.

## Highlights

- Long life: More than 500,000 cuts, tested with Bizerba PremiumTop Linerless
- Flexible label length: Ideal if detailed information needs to be printed
- Fewer roll changes, because the larger linerless rolls are used on the K3 100: diameter 150 mm
- Flexible use thanks to Hot Swap technology: This allows printers to be replaced faster during ongoing operation

## Added value

### Intuitive operation

Provides comfort for customers, ease of use for the operator staff: The high-quality Auto-Cutter used on the K3 linerless printer automatically cuts the linerless label, delivering a consistently clean, smooth-cut edge, making torn labels with frayed edges a thing of the past.

### Flexible label length depending on the information needs

The label length automatically adapts to the space required when printing information, no matter whether it includes standard details such as product name, date, price and weight or any additional legally required details such as ingredients, nutritional information, and details about known allergens or origin data. Adjusting the label width from 2" to 3" can be accomplished quickly and easily.

### Time savings mean lower costs

The large linerless rolls of the K3 100 printer have a diameter of 150 mm, greatly reducing the number of times a roll change is required, because significantly more labels can be printed with a single roll.

### Environmentally friendly printing

Because linerless labels do not use backing paper, you avoid waste with every roll, which in effect protects the environment.

### Maximum flexibility

The Hot Swap technology of the K3 printers allows you to remain flexible: At night, all you need to do is to switch from counter sales to labeling mode during ongoing operation by replacing the linerless printer with a label printer in no time at all.
