

Data Sheet

BRAIN2

The BRAIN2 software platform sets new standards in terms of centralization, data exchange and production reliability. Due to the modular design of this Bizerba solution BRAIN2 can optimally adjust to your needs by means of modules and extensions.

High performance
with a wide range of
solutions and options.

Product description

The new software generation: BRAIN2 offers a new and significantly extended range of functions across products. With BRAIN2 we focus on centralization, easy operation and data security. BRAIN2 includes central functions such as reporting, device management, user management and an audit trail system. Consequently, all BRAIN2 modules can be centrally and uniformly configured and administered.

Concept

Individual software solutions are possible thanks to the dynamic software platform of the innovative BRAIN2. BRAIN2 lets you link any number of BRAIN2 modules with the software platform. The modules can be synchronized and administered with the "Global Functions". Your benefit: They ensure an optimal analysis and control of the production lines. BRAIN2 is available in three packages (Basic, Standard and Enterprise) with different scope of services (see graphic).

Scope of functions

- BRAIN2 is a server-based system with a uniform database, numerous reporting functions, central user management and Audit Trail System.
- BRAIN2 allows the central definition and management of users and groups. Via Active Directory or LDAP you can adopt users and groups from higher-level systems. Your benefit: You save time and resources.
- Obtain application-dependent reports concerning product, result, process and system data with the comprehensive reporting functions of BRAIN2. No more elaborate manual analysis of data.
- BRAIN2 offers you an easy device integration by entering the IP or the device name. The central device overview and configuration via BRAIN2 simplify the use.
- BRAIN2 reports can be modified by means of the Report Designer. Its focus is on an individual design for specific requirements and adapted report contents.
- The Audit Trail function shows you the change history of the system data before and after a change. You can find out who edited the data record at what time and from which workstation.
- For a flexible interaction with existing systems you may import product data. Also the export of product, result, process and system data in CSV file format is possible.
- BRAIN2 lets you save reports in different formats. No more elaborate conversions of reports into other formats.
- For an easier further processing of data, BRAIN2 allows 3rd party software to read and write product, result, process and system data via the BRAIN2 Gateway.
- To save time for repetitive tasks, you can automate tasks with BRAIN2 such as reporting on the printer, backup of the BRAIN2 database and reporting via e-mail.

Expanded functions

- With the available Bizerba modules you dimension and adapt BRAIN2 Framework to fit your production. Misinvestments due to partially unused software packages are avoided.
- The dynamic design of BRAIN2 and the freely selectable applications allow you to clearly arrange and individually design the user interface. As a result you benefit from a more efficient and easier operation
- You define password lengths and deactivate user profiles due to invalid passwords. This allows you to increase system security and the integrity of the users.
